Scatterplot: when does it happen?

See the time of day a behavior clusters, over two weeks, before you look for why.

1. Each day, fill one box per half hour: blank = didn't happen, / = once or twice, X = three or more.
2. Draw a dash if the learner wasn't there, so an empty box always means it didn't happen.
3. After two weeks, look for rows that fill up. Take 4-term data at those times next.
